

Our complete design and manufacturing solution offers you more

- Complete in-house product design including:
 - system-level conceptual design
 - software development and verification
 - circuit design and 3D mechanical design
 - full prototyping, testing and validation
 - agency approvals and product compliance
 - extensive internal/external testing
 - world-class resources for RV / marine product development.

State-of-the-art automated equipment is the backbone of our manufacturing facility. Automated surface-mount and through-hole technologies, conformal coating, encapsulation and in-circuit testing, sophisticated MRP software, value-added assembly, customized packaging and flexible delivery options make us the preferred supplier to industry leaders in many sectors.

ISO 9001:2000 and Six Sigma certification, combined with our relentless dedication to quality at every step of our process make us a trusted supplier to both domestic and international manufacturers.

Total Acquisition Management™ (T.A.M.) and onshore/offshore options simplify your purchase process, manage volume-related variables and streamline logistics.

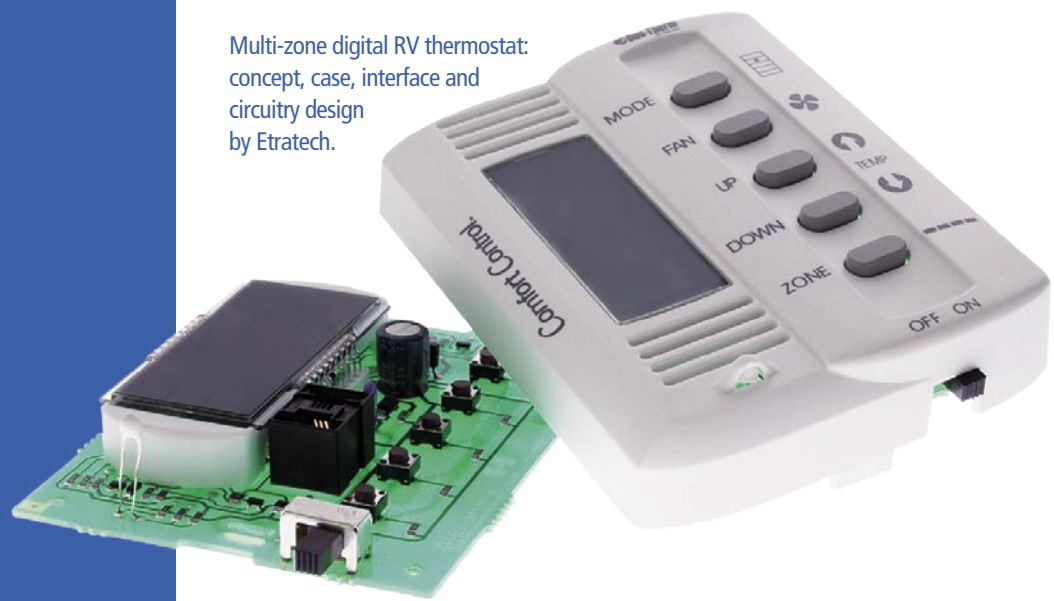

- Contact Etratech today to discover how our advanced electronic controls can enhance your product line.

Multi-zone digital RV thermostat:
concept, case, interface and
circuitry design
by Etratech.

Electronic controls for RV / marine applications

Your customers demand quality, reliability and innovative features. Etratech, with our consumer-focused approach and extensive industry experience, delivers advanced electronic controls that give you a competitive advantage, making your products the preferred consumer choice.

Etratech brings quality, design and manufacturing together in a single, powerful source.

Controls in motion – Etratech’s RV and marine sector expertise leads the way

CHALLENGE: Increasingly sophisticated consumers in the recreational vehicle and marine marketplace demand expanded functionality, advanced options and value-adds. Mobile HVAC, galleys and other systems must keep pace. Manufacturers must innovate to grow market share.

SOLUTION: Etratech’s experienced engineering team evaluates your product line, recommends state-of-the-art control options and designs advanced electronic controls to add value. Etratech’s low-cost, automated manufacturing and Total Acquisition Management™ (T.A.M.) approach mean that pricing is highly competitive and predictable, with quality assurance, inventory management and delivery logistics handled in a seamless process.

Powered RV awning control system engineered and manufactured by Etratech, including control centre circuitry with weather-resistant case, keychain remote control and system sensor.

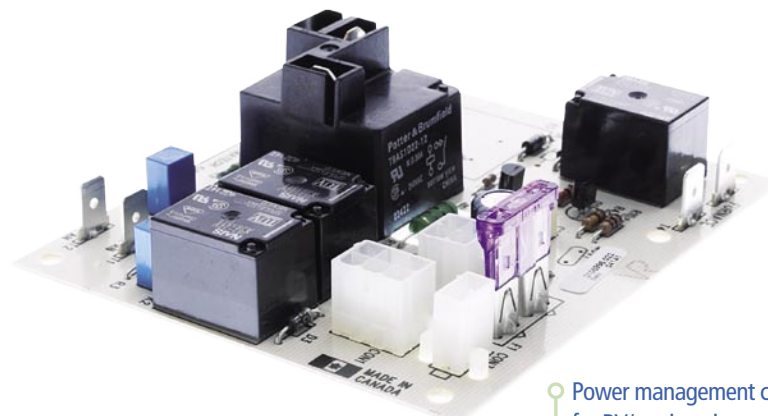

Compact design, resistance to vibration and environmental conditions, as well as seasonal fluctuations in product volume are all essential considerations to the RV and Marine manufacturers. Etratech designs and manufactures high-quality switches, timers, motor controls, convenience controls, thermostats, instrument panel controls, remote controls and many other devices trusted by leading manufacturers in this sector. Put our experience to work for you at the product design stage, and let our team of experts solve problems, reduce costs and improve reliability.

We understand the recreational vehicle sector and its special requirements.

Trust Etratech for high-quality controls for demanding marine applications.

Power management circuitry for RV/marine air conditioner.
